

Verification Loop (Beginner)

Use these checks gradually. Start with 1–2 checks only.

Goal: Catch errors (yours or the AI's) before you trust the result.

- Ask: "What assumption did you make?"
- Check units/meaning (does the answer make sense in context?).
- Plug the answer back into the original equation/problem.
- Try a simple test value (easy numbers) to see if the rule behaves correctly.
- Ask for an alternate method and compare results.
- If answers conflict, stop and identify exactly where they diverge.
